COVER LETTER

With my robust experience in API development, cloud infrastructure, and full-stack web technologies, I am eager to contribute to Oracle Health as the next member of your engineering team.

At Bank of America, I led the transformation of the ETS Fraud Sanctions application into a nearly 24/7 operational service with minimal downtime. This involved deep integration of Java, Python, and Angular technologies across more than 100 servers, demonstrating my capability to manage and enhance large-scale API environments. My role required constant innovation and adaptation, aligning with the dynamic nature of Oracle Health's services.

Here's a snapshot of my technical expertise:

- Advanced API design and management

- Robust cloud technology integration with AWS, and knowledge of OCI, Azure

- Full-stack development using Angular, SpringBoot, and Python

- Real-time data management and system architecture improvements

I am drawn to the opportunity at Oracle Health because of its commitment to pioneering in cloud solutions and healthcare technology. I am enthusiastic about bringing my background in scalable API solutions and cloud service innovations to ensure superior product integrations for Oracle's partners and clients.

Thank you for considering my application for this position. I am looking forward to discussing how my background, skills, and enthusiasms align with the goals of Oracle Health. I hope to hear from you soon to schedule an interview.

Sincerely, Jovan Andrei Tapia Valenzuela
